Fosroc Acid Etch*  
Concrete remover, cleaning and etching agent  

**Uses**

For the removal of mortar and plaster runs, droppings and stains from brickwork and concrete surfaces. Also for removal of hardened concrete from tools, machinery and equipment, or rust and mill scale from steelwork.

**Advantages**

- Rapid concrete etching action
- No corrosive action with glass, plastic, rubber and most base metals
- Cleans hardened concrete from tools and mechanical equipment

**Description**

Fosroc Acid Etch concrete remover, cleaning and etching agent, is a combination of acid based material, corrosion inhibitors and dispersing agents and is supplied as a clear green solution.

**Properties**

| Specific gravity | Typically 1.08 at 20°C |

**Instructions for use**

**Cleaning brickwork and rust stains from concrete**

A small trial area should be cleaned first to determine the most suitable Fosroc Acid Etch dilution. Pre-wet the surface, then, using a sponge, rub the affected areas with a solution of Fosroc Acid Etch and water. Strength of the solution required will vary but should be between 1:1 and 1:4 (by volume) Fosroc Acid Etch to water. When the action has finished, wash down thoroughly with clean water. As treatment with Fosroc Acid Etch can alter the surface finish of concrete, the minimum concentration necessary for effective removal of stains should be employed. The surface should be washed down with water immediately treatment is complete.

**Cleaning large items of equipment**

(Examples are readymix trucks, concrete mixers or barrows).

Fosroc Acid Etch should be liberally applied to the deposits by a soft broom and allowed to soak overnight if possible. If the surfaces of the deposit can be cracked by mechanical means this will speed up the operation. In severe cases more than one application may be necessary. On completion, dissolved deposits and loose material should be brushed and washed away with clean water.

**Cleaning small tools**

Use Fosroc Acid Etch as a dip. The tools should be soaked overnight, then taken out and washed with clean water to remove all loosely adhering materials. Care should be taken to avoid prolonged contact between Fosroc Acid Etch and zinc or aluminium parts of tools, such as rivets, etc.

**Cleaning concrete floors**

Pre-wet the floors, then, using a stiff bristle broom, brush the affected areas with a solution of Fosroc Acid Etch and water. Strength of the solution required will vary but should be between 1:1 and 1:4 Fosroc Acid Etch to water. When the action has finished, wash down thoroughly with clean water. Oil or grease should be removed by treatment with a suitable chemical degreaser followed by water or steam cleaning. Where heavy contamination occurs, as in garages or workshops, pre-treatment with Fosroc Acid Etch assists in freeing oil or grease and renders the action of the degreaser used more effective.

**Removal of rust and mill scale**

After wire brushing to remove loose material, apply a solution of Fosroc Acid Etch and water using a soft broom or brush and leave to act for 20-40 minutes. Strength of the solution required will normally be between 1:1 and 1:4 Fosroc Acid Etch to water. Wire brush again to remove remaining loose material and finish by thoroughly washing down with clean water. Repeat if necessary.

**Spillage**

Spillages should be hosed down with plenty of water.

**Caution**

Fosroc Acid Etch is acid based and should be handled with care. Acid vapours from undiluted product can damage nearby surfaces, notably causing rusting of unprotected steel. If in doubt about its effect on a material, test a small area before general application.

**Technical support**

Fosroc offers a comprehensive range of high performance, high quality flooring, jointing and repair products for both new and existing floor surfaces. In addition, Fosroc offers a technical support package to specifiers, end-users and contractors, as well as on-site technical assistance in locations all over the world.
Fosroc Acid Etch*

Estimating
Supply
Fosroc Acid Etch : 25 litre drums

Storage
Fosroc Acid Etch has a shelf life of at least 24 months when stored unopened in original containers.

Precautions
Health and safety
Fosroc Acid Etch is corrosive and should not come into contact with skin and eyes or be swallowed.

Wear suitable protective clothing, gloves and goggles. Use only in well ventilated areas. In case of contact with skin, wash immediately with plenty of soap and water. If irritation persists, medical advice should be sought. In case of contact with eyes, rinse immediately with plenty of clean water and seek medical attention. If swallowed, wash out mouth and drink at least 500 ml of water or milk. Seek medical attention immediately - do not induce vomiting.

Fire
Fosroc Acid Etch is non-flammable.

Additional Information
Fosroc manufactures a wide range of complementary products which include:

- waterproofing membranes & waterstops
- joint sealants & filler boards
- cementitious & epoxy grouts
- specialised flooring materials

Fosroc additionally offers a comprehensive package of products specifically designed for the repair and refurbishment of damaged concrete. Fosroc’s ‘Systematic Approach’ to concrete repair features the following:

- hand-placed repair mortars
- spray grade repair mortars
- fluid micro-concretes
- chemically resistant epoxy mortars
- anti-carbonation/anti-chloride protective coatings
- chemical and abrasion resistant coatings

For further information on any of the above, please consult your local Fosroc office - as below.
